PROFESSIONAL SUMMARY

Entry-level Data Analyst and MCA graduate (2026) with hands-on experience in SQL, Python (Pandas, NumPy), Excel and Power BI, gained through a four-month AI R&D data internship and analytics-focused projects. Experienced in data ingestion, database schema work, logging and evaluating system performance using metrics such as detection accuracy, detection time and false-positive rate. Looking to turn raw data into clear, decision-ready insights in a Data Analyst, MIS or BI role.

TECHNICAL SKILLS

Data Analysis: Data Cleaning, Data Validation, Exploratory Data Analysis (EDA), KPI and Performance Evaluation, Reporting
SQL & Databases: SQL (MySQL, SQLite) – querying, joins, aggregations; Schema Design, Data Modelling
Visualization & BI: Power BI, Microsoft Excel
Programming: Python (Pandas, NumPy, Requests), Jupyter Notebook
Tools: Git, GitHub, MySQL Workbench, VS Code, REST APIs
Backend (supporting): Flask, FastAPI, PHP
Machine Learning (additional exposure): Scikit-learn, TensorFlow, MobileNet

PROFESSIONAL EXPERIENCE

Data Analytics Intern March 2026 – July 2026
Chiac ASI (Panchasutra Ltd.) – AI R&D Internship Program

- Worked on data modelling and database schemas for AI/ML applications, including SQLite tables for incidents, agent messages, ML models and rescue teams.
- Implemented state-management and logging components to track agent interactions and workflow execution.
- Processed and validated event log datasets (hundreds of daily records) using Python and SQL, identifying anomalous agent behaviours and reducing workflow triage time.
- Supported data quality checks and debugging by examining logged execution records and identifying inconsistencies in simulation workflows

PROJECTS

Scout IQ – Football Data Analytics Pipeline | Python, Sportmonks API v3, JSON, MySQL, Power BI, Git

- Built a reusable Python API client to retrieve football leagues, seasons, teams, fixtures and fixture-level data from the Sportmonks Football API v3.
- Implemented error handling for authentication failures, rate limits and request errors; kept API credentials secure using environment variables.
- Developed an ingestion script that saves raw JSON responses and extracts summary information on teams, stages and fixtures for downstream analysis; tested API calls and verified the returned data.
- Created an exploratory Power BI dashboard visualizing possession vs. goal conversion rates across teams, utilizing DAX measures for seasonal trend comparison

Multi-Agent Disaster Management Simulator (MCA Final Year Project) | Python, FastAPI, SQLite, React

- Responsible for the state-management, logging and evaluation components of a multi-agent disaster-response simulation with machine learning modules.
- Evaluated simulation performance using detection accuracy, detection time and false-positive rate.

Skin Disease Detection – AI/ML Screening Prototype | Python, TensorFlow, MobileNet, Flask

- Developed a Flask web application that integrates a Mobile Net image-classification model to generate skin-condition predictions (prototype; outputs are model predictions, not medical diagnoses).
- Implemented user authentication, an administrative dashboard and backend data storage.

EDUCATION

Master of Computer Applications (MCA) 2024 – 2026
Maharaja Institute of Technology, Mysuru | CGPA: 8.43 / 10

Bachelor of Computer Applications (BCA) 2021 – 2024
Vidhya Vikas First Grade College, Mysuru | CGPA: 7.5 / 10

CERTIFICATIONS

- Agentic AI and AI Agents for Leaders – Vanderbilt University (Coursera) | September 2026
- Blockchain and its Applications – NPTEL, IIT Kharagpur | January – April 2025
